DESCRIPTION

The PVMI-nTE- λ_{opt} photodetectors series (λ_{opt} - optimal wavelength in micrometers) feature IR photovoltaic immersed detector on n-stage thermoelectrical cooler. The devices are optimized for the maximum performance at λ_{opt} , large area devices.

Highest performance and stability are achieved by application of variable gap (HgCd)Te semiconductor, optimized doping and sophisticated surface processing. Custom devices with quadrant cells, multielement arrays, different windows, lenses and optical filters are available upon request.

Standard detectors are available in TO-8 packages with BaF₂ windows. Other packages, windows and connectors are also available.
