In regard to InfraTec's wide range of products the ImageIR® 9500 thermographic camera is designed for the international market. Its highly sensitive cooled focal-plane array photon detector is based on mercury cadmium telluride (MCT) and provides (1,280 × 720) IR pixels. The geometrical resolution can even be increased to (2,560 × 1,440) IR pixels with the MicroScan function. With its outstanding thermal sensitivity up to 0.025 K, users can create low-noise, fine-resolution images using the quadruplication of the image formats due to the innovative, opto-mechanical MicroScan technology. In addition: This model of the high-end ImageIR® camera series impresses with extremely short integration times in the microsecond range and very high frame rates of 120 Hz, which increase to 1,517 Hz in sub-frame with (320 × 180) IR pixels.

The ImageIR® 9500 is suitable for highly demanding applications in science and industry, object monitoring and microthermographic analysis of extremely small structures. It is equipped with an integrated 10 GigE interface that enables data exchange between camera and computer at a speed of 10 Gbps. Due to the modular concept consisting of optics, detector and interface modules, the camera can be individually configured and optimally adapted to the respective task. The same purpose is served by the range of high-quality, radiometric precision optics, which ranges from telephoto lenses, standard and wide-angle lenses to macro- and microscopic lenses.
