

UM-I-6

3.0 – 6.7 µm and DC – 1 MHz HgCdTe universal IR detection module with optically immersed photovoltaic detector

UM-I-6 is universal „all-in-one” IR detection module. Thermoelectrically cooled, optically immersed photovoltaic detector, based on HgCdTe heterostructure, is integrated with transimpedance, DC coupled preamplifier, a fan and a thermoelectric cooler controller in a compact housing. 3° wedged zinc selenide anti-reflection coated window prevents unwanted interference effects. UM-I-6 detection module is very convenient and user-friendly device, thus can be easily used in a variety of MWIR applications.

Spectral response ($T_a = 20^\circ\text{C}$)

Exemplary spectral detectivity, the spectral response of delivered devices may differ.
